 Claim 3: Page 8-9: 13pp; Japanese. The sequence (Q55708) shows a recombinant plasmid which encodes myoinositol dehydrogenase. The plasmid can be transformed into a mitable host thus producing myoinositol dehydrogenase quickly a mitable host thus producing myoinositol dehydrogenase quickly.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                genes (see also 74376-8) isolated from a thiol-selected interleukin 2-indused human T-cell blaat cDMs library. 6 Genes (CRL, 2. 3, 5, 6, 8) are novel. CR3 shows homology to G-coupled 7 transmenbrane spanning receptors of the prostagiandin family and probably plays a regulatory role in cellular proliferation and/or inflammation. It provides a novel receptor that allows the manipulation of cellular functions controlled by blochemical pathways signalled by the receptor and may be used to identify lignals useful for modulating cellular proliferation and inflammation. Recombinant CR3 polypeptides can be produced in bost sequence 338 As.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  21
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  245 pgariig

Ammonitex degensii appartate aminotransferase; K4/AA; chiral compound.
Ammonitex degensii strain KC4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              gain. Calactose induction of P1 is mediated, at least in part, by an operator sequence whose 5' end is located 10 by upstream of the transcriptor may be a parameter is repressor by the parameter in the parameter is repressor by the parameter in the parameter is repressor by the parameter in the parameter in the parameter is promoter expression in constitutive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          375 prigaap 381

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NW PAR: PCR: primer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NA-SDB: 090268.

Production of very long chain fatty acid(s) in plant(s) - to produce drought and stream resistant transgenic plant(s) - to produce drought and stream resistant transgenic plant(s) - to produce produce drought and stream resistant and stream resistant application mo 9,1012A1, Jojoba fatty acyl reductase sequence is known a membrane preps. having wax synthase activity is solutted, the wax synthase activity is solutiled, and the wax synthase activity is solutiled. The source material is the outer shells and seed coats of jojoba embryos.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             426 lllrlvd 432

```
Dish construct expressing jojobs wax synthase and transformed Brassica cells: - useful for producing wax ester(s) for use in pharmaceuticals and commercies, etc.

Disclosure; Column 43-46; 50pp; English.

A jojobs fatty-acyl-reductase CORN was used in the construction of vectors for plants ransformation. Transgenic plants, e.g. cliseed rape, expressing the reductase in addition to a heterologous sequence 433 As;

The Novel human cytomegalovirus helicase - used for screening for NCHV PT attivities and is dayosis a NCHV practice of the screen and is dayosis a NCHV practice of the present sequence represents human cytomegalovirus (RCHV) UL70 Ct than station product. The UL70 open reading frame spans nucleited as C 193035 through 100355 of HCHV AD169 which was amplified by PCR primers C 193735 through 100355 of HCHV AD169 which was amplified Moral and CC cloned into Med./Mani digested 19877H6 vector DNA to yield the plasmid CC p8877H6 UL70. The amplified HCHV UL70 orf sequence and it translational CC p8877H6 UL70. The amplified HCHV UL70 orf sequence and it translational CC product were determined. Recombination into BacPM 6 viral DNA, plaque CC purification and generation of viral stocks were by standard protocols. CC The protect pass used with a new HCHV belicase in a screening compounds which inhibit HCV helicase (preferably with an IC50 of not greater than 300Ms), and as a disponsatic tool for diseases squames 340 AM. Infaction.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        repair genes. Defects or alterations in such a gene result in the accumulation of unstable repeated DNA exquences a feature of a number of different enhours. The identification of a defect in the missatch repair pathway can be disposelt of a prediaposition to cancer and proposelt of a particular memmalian cancer e.g coloractal, overlain, redescript (useriam), renal, bladder, skin, rettal and bowel. The user of the spy and in vaccines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             -WAY-1906 (first entr)

cc w07521-W07524, and W07527 represent T-cell modulating peptides that can ce be used in the method of the invention. These sequences are based on a cc portion of the generic peptide corresponding to residues 70-91 of the cally a complex (MEO) class I continue disease involving T-cell mediated destruction of tissue in cc antisen see W07520). The method is for affecting the course of an ic commania. These peptides are used especially to treat insulin dependent cd dabetes mellitus, preferably being administered during the pre-clinical cc stage to delay onset of the disease. Other diseases that can be treated care multiple scierosis, rheumatoid arthritis, provinsis, provinsis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  pp 01-80V-1995, J09238.

Any unbound peptides are removed and the complexed peptide light at the contacting them the complexes. The selected peptides are enriched by re-contacting them with the SH3 domain and then condidence which hind to the SH3 domain are detected. The located SH3 binding peptides may be used in the diagnosis, prevention and treatment of conditions or discoser resulting from collular processes mediated by an SH3 based interaction should be returned to the conditions treatment of the conditions of the best peptides a located selected by an SH3 based interaction the conditions of the the problems in which an SH3 of neutrophil oxidase pf7 and p67 complex is sequence 14 Ah;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2 asfral 7
